ABSTRACT: Helping patients achieve an optimal quality of life through patient-centered treatment planning should be the ultimate goal of all oral health care providers. However, this issue extends beyond the realm of the individual clinician's office. This text presents quality-of-life research from various fields, including psychology, public health, and general health care; discusses how a patient-centered approach can be applied to basic oral and craniofacial research, clinical dental practice, community dental health issues, and dental education; and addresses how oral health-related quality of life relates to treating and understanding different patient populations, such as children with special needs, medically compromised patients, patients with oral cancer, and patients with chronic facial pain. Also discussed is how factors such as race/ethnicity, gender, and age can affect oral health-related quality-of-life concerns and treatment strategies. Finally, the book offers an outlook on the role that oral health-related quality of life will play in future research and dental education.

Helping people to understand that they can influence whether they have good or bad teeth is of prime importance. It includes models and theories of health behavior, influence of social factors on oral health promotion, government health policies, health education in specific settings, national campaigns, and evaluation of interventions. The historical background to health education and promotion is also discussed. The international roster of contributors provides a diverse set of topics. The book covers the complete range of health promotion activity. The comprehensive contents list will help readers and dental health professionals to target the sections of particular interest.
