Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Between 1973 and 2016, the ways to manipulate DNA to endow new characteristics in an organism (that is, biotechnology) have advanced, enabling the development of products that were not previously possible. What will the likely future products of biotechnology be over the next 5 to 10 years? What scientific capabilities, tools, and/or expertise may be needed by the regulatory agencies to ensure they make efficient and sound evaluations of the likely future products of biotechnology? Preparing for Future Products of Biotechnology analyzes the future landscape of biotechnology products and seeks to inform forthcoming policy making. This report identifies potential new risks and frameworks for risk assessment and areas in which the risks or lack of risks relating to the products of biotechnology are well understood.

Rethinks the criteria governing agency and receptivity, health and toxicity, productivity and stillness

A new edition of the classic study of the relationship between predator and prey follows the life cycles of the wolves in Michigan's Isle Royale National Park and the mood on the island, offering a firsthand account of the nearly fifty-year wildlife study, complemented by more than one hundred color photographs. Reprint.

The good news is that anxiety, guilt, pessimism, procrastination, low self-esteem, and other "black holes" of depression can be cured without drugs. In Feeling Good, eminent psychiatrist, David D. Burns, M.D., outlines the remarkable, scientifically proven techniques that will immediately lift your spirits and help you develop a positive outlook on life. Now, in this updated edition, Dr. Burns adds an All-New Consumer's Guide To Anti-depressant Drugs as well as a new introduction to help answer your questions about the many options available for treating depression. - Recognise what causes your mood swings - Nip negative feelings in the bud - Deal with guilt - Handle hostility and criticism - Overcome addiction to love and approval - Build self-esteem - Feel good everyday
