Servers provide the shared resources that network users crave, such as file storage, databases, e-mail, Web services, and so on. Choosing the equipment you use for your network ' s servers is one of the key decisions you ' ll make when you set up a network.

Network Basics: Servers - dummies
The network computer that contains the hard drives, printers, and other resources that are shared with other network computers is called a server. This term comes up repeatedly, so you have to remember it. Write it on the back of your left hand. Any computer that ' s not a server is called a client. You have to remember this term, too.

Network Basics: Clients and Servers - dummies
A server acts as a platform for sharing data (files / images) & applications (email etc.) across multiple users. A server uses many of the same components as a regular PC, but these are usually of a higher grade, designed & built for constant rather than sporadic use.
