The Buddhist World joins a series of books on the world's great religions and cultures, offering a lively and up-to-date survey of Buddhist studies for students and scholars alike. It explores regional varieties of Buddhism and core topics including buddha-nature, ritual, and pilgrimage. In addition to historical and geo-political views of Buddhism, the volume features thematic chapters on philosophical concepts such as ethics, as well as social constructs and categories such as community and family. The book also addresses lived Buddhism in its many forms, examining the ways in which modernity is reshaping traditional structures, ancient doctrines, and cosmological beliefs.

Literature on women, development and environment is abundant. The

relationship between women and ecology has been analyzed by various disciplines, by specialists from the North as well as the South. This book offers a new perspective, specifically to challenge the assumption that women have a special affinity with the Earth and therefore a historic mission for the care of the environment. The book explores spiritual, religious and philosophical beliefs concerning women and ecology, and whether women are truly "sacred custodians" of the Earth. This concept has evolved from ideas developed by eco-feminists. Whether and how different belief systems can be put to use to create an awareness to protect, preserve and improve ecological conditions is discussed. The collection of papers demonstrates the complexity of the issues and the variations and

The book challenges policy solutions which are devised to be on a global scale and to create unrealistic global aspirations, and the value of targeting women in a particular attempt to achieve environmentally sustainable development.

The ways in which religious communities interact with one another is an increasing focus of scholarly research and teaching. Issues of interreligious engagement, inclusive of dialogue more specifically and relations more generally, attract widespread interest and concern. In a religiously pluralist world, how different communities get along with each other

is not just an academic question; it is very much a focus of socio-political and wider community attention. The study of religions and religion in the 21st century world must necessarily take account of relations within and between religions, whether this is approached from a theological, historical, political, or any other disciplinary point of view.

Understanding Interreligious Relations is a reference work of relevance to students and scholars as well as of interest to a wider informed public. It comprises two main parts. The first provides expositions and critical discussions of the ways in which 'the other' has been construed and addressed from within the major religious traditions. The second presents analyses and discussions of key issues and topics in which

interreligious relations are an integral constituent. The editors have assembled an authoritative and scholarly work that discusses perspectives on the religious 'other' and interreligious relations that are typical of the major religious traditions; together with substantial original chapters from a cross-section of emerging and established scholars on main debates and issues in the wider field of interreligious relations.

These 13 workshop-based papers critique ecofeminist assumptions about traditional societies viewing women as closer to nature and more spiritual than men. Following an overview by Low (history, Open U.) and Tremayne (social and cultural anthropology, U. of Oxford), the first contribution frames the debate over gender politics and

environmentalism. Next, case studies illustrate sacred landscape (not intrinsically ecologically-oriented) in such societies past and present. Part III treats nature and gender in several major world religions. The final paper discusses contemporary paganism's quest for wholeness. In *The X-Files and Philosophy*, thirty-six fearless philosophers seek for the truth which is out there, in here, at least somewhere, or (as the postmodernists claim) nowhere. One big issue is whether the weird and unexplained happenings, including the existence of entities unknown to

traditional science, might really exist. And if they did, what would be the proper way to behave towards them? Some of these entities seem to flout conventional laws of nature—but perhaps we need to allow for different, as yet undiscovered, laws. If such fabulous entities really exist, what do we owe them? And if they don't exist, why do we imagine they do? In *The X-Files*, regular science is represented by Scully and usually turns out to be wrong, while open-minded credulity or pseudoscience is represented by Mulder and usually turns out to be right, or at least somehow on the right track. Scully demands objective, repeatable evidence, and she usually gets it, with Mulder's help, in astounding and unwelcome ways. What lessons should we take from the finding of *The X-Files* that respectable
